**THE 2021-22 STRIVE HI SCHOOL PERFORMANCE REPORT** is an annual snapshot of a school's performance on key indicators of student success. This report shows schools' progress on federally-required indicators under the Every Student Succeeds Act; in addition to state-adopted measures focused on student equity, achievement and success. These results help inform action for teachers, principals, and other stakeholders.

## Our Story

Linapuni Elementary School initiated its transformation to an Early Learning School with the addition of one pre-K class of twenty students in SY 2009-10. The following year, we increased by one more pre-K class. Eventually, the transfer of all grade two students to Kalihi-Waena & Fern Elementary Schools allowed us to expand to four pre-K classes in SY 2011-12. After several grant requests were denied, it became evident that we would need to use school carryover funds in order to maintain the pre-K classes. Consequently, we gradually downsized to only two pre-K classes by SY 2013-14, our last year of remaining carryover funds. Fortunately, Linapuni was one of eighteen schools selected to receive funding from the Governor's Executive Office on Early Learning (EOEL) starting in SY 2014-15. Specifically, EOEL provided Linapuni the financial means to maintain the two remaining pre-K classes. Also, through our partnership with PACT, one of our community partners, we were able to establish and maintain a Special Education Inclusion pre-K class to accommodate 3 year old Special Education students (who are not eligible to enroll in EOEL pre-K classes due to age requirement) beginning SY 2016-17. Currently, Linapuni services three pre-K classes. Additionally, there were four classes for each of the other grade levels (i.e. grades K, 1).

Now that Linapuni has completed the physical transformation to an Early Learning School, our faculty is focused on strengthening instructional practices & curriculum planning through on going professional development supported by the EOEL state resource staff. Also, Linapuni funds a designated full release instructional Coach/Mentor who provides in class support to teachers.

Once again, chronic absenteeism was a major concern. In addition to implementing the positive deviance model which encourages parent engagement by acknowledging/owning the problem of chronic absenteeism and finding grass roots solutions, Linapuni faculty made a commitment to adopt the Multi Tiered Systems of Support (MTSS) with training coordinated by Honolulu District Office. Through the efforts of the MTSS Cadre, faculty worked on building a strong Tier I in their classrooms and faculty & staff consciously worked on building positive relationships with students and their families.

Lastly, our WASC mid cycle visit was conducted in April 2019. Based on the WASC committee members' feedback, Linapuni is on track to successfully address our identified school wide critical growth areas. Moreover, the Academic Reflection Team (ART) has taken responsibility and leadership in addressing identified major growth areas.

How do you measure how well a school is doing? In our estimation, it's more than scores on high-stakes tests. Schools should show that they are supporting children along the educational pipeline toward college, career, and community readiness. Are our students attending school? Are they graduating? Are they going to college? And how successfully are schools reducing the achievement gap between high-needs and non-high needs students?

## Pandemic Related Considerations When Assessing Strive HI Results

Throughout this 2021-22 school year (SY), numerous pandemic-related challenges arose across Hawai'i's public schools. Many challenges were common across schools, yet others were unique to a particular school or group of schools within a particular geographic area. The pandemic's impact on instruction and learning had an effect on teachers and students, and those conditions should be considered when examining student achievement and school performance results.

---

### Chronic Absenteeism and the Pandemic

(For 2022 results, see Page 4)

In school year 2021-22, there was a substantial, statewide increase in the chronic absenteeism rate. These increases were largely pandemic related and schools had very little control over such absences. While schools continued to implement follow-up procedures for absent students, the impact was minimal given the large number of students kept home due to several pandemic related factors. A number of factors described below were also seen nationally and are not unique to Hawaii only.

It is important to reiterate that the purpose of the Strive HI Chronic Absenteeism Measure is to identify schools where a substantial proportion of students did not receive the full year of instructional time. The measure is not intended to place fault with schools and is based on all student absences, both unexcused and excused absences. The following is a summary of key pandemic related factors that contributed to the large increase in chronic absenteeism rates across schools.

#### Statewide factors

The single most influential factor attributable to 2021-22 absences was due to COVID infections and quarantines due to potential exposure. Increases in absences and peaks in infection rates were consistently mirrored during September – November 2021 (Delta variant) and January – May 2022 (Omicron variant). Key factors observed included the following:

- Elementary students were disproportionately negatively impacted, accounting for over half of 2021-22 chronically absent students.
- Vaccinations for elementary age students were not readily available through the first half of the school year.
- Vaccine apprehension resulting in parents/guardians more likely to keep their child home knowing he/she is unvaccinated.
- Changes with COVID exposure/infection guidance caused confusion around when students should attend or not attend school.
- Exposure or infection of a single student impacting an entire household including multiple school aged siblings.
- Convenient and abundant access to home tests increased identification of positive results (including non-symptomatic cases) resulting in isolation and quarantines within the household.

#### Localized factors

The following are localized factors that were reported to increase absences. One was clustered in an individual complex area and the other disproportionately impacted a specific island:

- U.S. Navy emergency fuel storage leak coinciding with increases in absenteeism across one Central Oahu complex area.
- Bus driver shortages were already an issue pre-pandemic and exacerbated further by the pandemic. Approximately 15% of schools statewide were impacted to some degree. Big Island schools were most impacted with around 50% of schools across the island.

## How many students participated in testing?

These bar charts display participation rates across language arts, math, and science for All Students and high-needs subgroups. School rates are accompanied by complex area and statewide rates allowing for side-by-side comparisons. Consideration should be given to the following: (A) Participation rates should always be taken into consideration when reviewing proficiency results, and especially so, when students' modes of learning, instruction, and test-taking options are disrupted or altered during the school year; (B) School participation rates should be compared across key subgroups as well as complex area and statewide rates; (C) Participation rates allow readers to judge the extent proficiency and other test derived results such as growth, achievement gap, and 3rd and 8th grade literacy rates, are representative of all students eligible to test; and (D) When participation rates drop below 95%, one should ask, "To what extent are these results reflective of all students eligible to test?" "Are certain student subgroups over- or under-represented?" "Do those differences skew achievement results?" The following link provides guidelines and considerations when examining achievement results derived from low-participation rates, as well as other important pandemic related considerations: Appropriate Use of SY 2020-21 Hawai'i Statewide Assessment Program (HSAP) Results.

## 2021-22 Strive HI School Performance Results

IMPORTANT: Due to COVID-19, in SY 2020, no statewide tests were administered. In SY 2021, Hawai'i public schools administered a shortened version of the statewide assessment, a skip-year growth methodology was used, and participation rate penalties were waived as approved by the U.S. Department of Education.

### How are students performing in each subject?

Measures the percent of students meeting the standard/who are proficient on state assessments. No participation penalty was applied to 2021 proficiency results.

### How are students performing compared to others?

Compares the percent of students meeting the standard/who are proficient on state assessments.

### How are student subgroups performing?

High Needs: English learners, economically disadvantaged, and students receiving special education services. Non-High Needs: All other students.

# 95%

of students learning English are **on-track** to English language proficiency

### How are students' academic progress measured?

Schools' Smarter Balanced growth is represented by a Median Growth Percentile (MGP) which ranges from 1 - 99. HSA-Alt & KAEO growth shows the percent of students making one year of growth.

### How many 3rd graders read on grade level?

-- of 3rd graders read **near, at, or above** grade level

### How many students missed 15 or more days of school this year?

### How do students feel about their school?

Measures percent of students reporting positive school climate as measured by the Panorama Student Survey by school level.

<sup>1</sup> 2020 chronic absenteeism is based on absences only through the end of the third quarter (3/13/20). As such, the rate is not directly comparable with years prior to or following 2020, which were based on absences through May 1 of each school year.
