Roosevelt High School has a culturally diverse enrollment of 1,440 students. As Rough Riders, we have a continuous drive to improve and engage students, teachers, parents, professional networks, and community partners to support our core values that bring operational efficiency and a successful learning environment.

One focus is increasing student satisfaction, voice, and empowerment. We have formed committees focusing on important programs and processes, which also align to our school's Academic Plan. The eight committees are Advisory, AVID, Formative Instruction/Data Teams, ILT, PBIS, Post High School, SPED Inclusion, and Technology. Teachers' strengths were considered when placing faculty in various committees. Five of the eight committees have student representation to validate and empower their voice. The combining of teacher and student voice through the committees has led to improved dialogue among stakeholders.

We have also partnered with Honolulu Community College and University of Hawaii's Manoa Academy, to provide free dual-credit learning opportunities. It has allowed our students to complete high school requirements, while getting a head-start with earning credits for college. Our Early College program has shown positive academic growth and continues to expand.

As a school we foster a culture that exemplifies our mission to “Educate and Empower,” and strive to attain our vision by providing opportunities for our students to be “College Ready, Career Ready, and World Ready.” Our faculty and staff are committed to creating and sustaining a school climate that is warm, inviting, safe, and secure, with a strong sense of 'ohana and academic excellence for our students.

How do you measure how well a school is doing? In our estimation, it's more than scores on high-stakes tests. Schools should show that they are supporting children along the educational pipeline toward college, career, and community readiness. Are our students attending school? Are they graduating? Are they going to college? And how successfully are schools reducing the achievement gap between high-needs and non-high needs students?
Pandemic Related Considerations When Assessing Strive HI Results

Throughout this 2020-21 school year (SY), numerous pandemic-related challenges arose across Hawaiʻi’s public schools. Many challenges were common across schools, yet others were unique to a particular school or group of schools within a particular geographic area. The pandemic’s impact on instruction and learning had an effect on teachers and students, and those conditions should be considered when examining student achievement and school performance results.

This section provides important contextual information that should be considered when assessing 2021 Strive HI results, and when comparing 2021 results to prior year results. To the extent data were available, several key metrics are presented to provide context to learning, instruction, and test-taking during the past school year, including participation rates, students learning modalities, and access to adequate digital devices and internet connectivity.

How many students participated in testing?

These bar charts display participation rates across language arts, math, and science for All Students and high-needs subgroups. School rates are accompanied by complex area and statewide rates allowing for side-by-side comparisons. Consideration should be given to the following: (A) Participation rates should always be taken into consideration when reviewing proficiency results, and especially so, when students’ modes of learning, instruction, and test-taking options are disrupted or altered during the school year; (B) School participation rates should be compared across key subgroups as well as complex area and statewide rates; (C) Participation rates allow readers to judge the extent proficiency and other test derived results such as growth, achievement gap, and 3rd and 8th grade literacy rates, are representative of all students eligible to test; and (D) When participation rates drop below 95%, one should ask, “To what extent are these results reflective of all students eligible to test?” “Are certain student subgroups over- or under-represented?” “Do those differences skew achievement results?” The following link provides guidelines and considerations when examining achievement results derived from low-participation rates, as well as other important pandemic related considerations: Appropriate Use of SY 2020-21 Hawaiʻi Statewide Assessment Program (HSAP) Results.

https://drive.google.com/file/d/1mve1u1iXV6MQW3idks0mEd7la76YB4g2/view?usp=sharing
In what learning environment did students receive instruction?

This bar chart shows the percent of students receiving instruction completely in-person or in a blended or completely virtual setting. Consideration should be given to the following: (A) Students' learning modality varied across schools; (B) Some students seemed to achieve better in-person, while blended or completely virtual settings may have been more conducive to learning for other students; (C) A student's learning modality can serve as a useful comparison when examining individual student achievement based on their learning modality, however, caution should be given when drawing such conclusions; and (D) Certain students may be more likely to attend in-person compared to other types of students, that is, students with disabilities. Schools may look into these students to determine if that is the case before drawing conclusions about performance based on students' learning modality.

How many students did not have adequate digital devices or internet access?

The following show the number and percent of students who did not have a digital device or internet access to adequately engage in distance learning.

9 out of 1467
0.6% of students did not have a device for connectivity
State: 1.9%

9 out of 1467
0.6% of students did not have internet access
State: 2.8%

2020-21 Strive HI School Performance Results

IMPORTANT: Due to COVID-19, in SY 2020, no statewide tests were administered. In SY 2021, Hawaiʻi public schools administered a shortened version of the statewide assessment, a skip-year growth methodology was used, and participation rate penalties were waived as approved by the U.S. Department of Education.

How are students performing in each subject?
Measures the percent of students meeting the standard/who are proficient on state assessments. No participation penalty was applied to 2021 proficiency results.
